FENCING SYSTEMS

The AB Ability Multi Use Games Arena is a product line designed and developed from the findings of a long consultative process involving specifiers and users of multi sport equipment throughout all parts of the United Kingdom.

The considered intention of the Ability multi sport line is to provide an aesthetically pleasing, public recreational facility, competitively priced whilst simultaneously retaining the key fundamental elements of strength and durability.

All parts of the finished products have been considered to enable longevity and sustainability. High gauge steel is used in the product construction after which a hot dipped galvanised and polyester powder coated finish is applied.

To formalise and recognise the importance of regulatory accreditation the AB Ability system has been designed to the requirements of BSI PAS 30, "outdoor recreational Multi-Sport equipment intended for permanent installation, including facilities for basketball, football and hockey," BS EN 15312:2007. AB's confidence in the multi-sport system and the material protection manufactured into the product offer a comprehensive TEN year guarantee against material and system failure.

The Ability system is made up of tough and durable mesh panels and tubular posts.

Available in heights of 1,2 & 3 metres which can be used in any combination. All steelwork is hot dipped galvanised and polyester powder coated after manufacture. All fittings are graded stainless steel.

Accessories

To compliment our superior range of ballcourt fencing system we have a full range of accessories including goals. We can also supply combination goal units, cricket wicket panels, entrance chicanes, gates and shelters.

fencing systems

Teen Shelters

Providing a place for teenage children to meet sends a positive message to everyone in the community. When situated appropriately this well designed shelter signals to everyone

that young people need a place to go. Our shelters are constructed using high specification gauge steel to ensure the greatest durability and maximum visibility.

Technical Specification

Posts

90mm or 115mm diameter tubular steel

Panelling

950mm x 1830mm, manufactured from 25mm x 3mm bar crossed with 6mm verticals. Mesh pattern 41/50mm or 41/100mm.

Escape Routes

All Goals have escape routes as standard. Escape width 400mm - 1200mm.

Steelwork

After the manufacturing process all steelwork is hot dipped galvanised to BS EN ISO 1461.

Finish

After Galvanisation all steelwork is 'Fettled' to remove any sharp edges prior to applying electrostatic polyester powder paint to BS-EN6496/7 1722 part 16. The Ability systems are supplied using contemporary colours however special colouring can be specified by the client.

Manufacture

All our products are manufactured in house by our team of experienced craftsmen

Installation

We offer a nationwide installation service with our team of experienced professionals.

PAS 30

All AB products are designed and built using this standard as a minimum requirement.

Sports Surfaces, Line Markings & Floodlighting

AB provide various alternatives to suit your specific requirements; details would be specific to each project and therefore further details are available upon request.
